

**Welcome to Chiropractic at: En~Motion Wellness Center**

**Dr Robert C Slater: BA, MSc, DOT, DC**

**Active Chiropractic Provider for 34 Years**

**En~ Motion Wellness D/B/A:**

**Healing Hands Wellness Center**

**“Move Well; Live Well; Keep The Process Active”**

**Chiropractic care brings immediate results for thousands of patients across the USA every day and this result is based on one scientific fact: Through communication between the brain and body, the nervous system controls the function [inflow and outflow of energy] into every cell, tissue, organ and system in your body. Complete restoration of that precious communication process takes time. The spinal problems you now have can be fixed this way.**

**The nervous system consists of your brain, spinal cord and millions of spinal nerves that arise from the spinal cord and penetrate all body tissues. By correcting spinal misalignments, chiropractic care restores this essential spinal nerve inflow and outflow communication process, from brain to toe and everything in between.**

**While your brain is protected by the skull, your spinal cord is protected by 24 moving bones, called vertebra. Many normal everyday activities may cause the bones of the skull as well as spinal segments to lose their normal alignment and motion. This is called a spinal 'subluxation' [cranial or spinal] and can result in nervous system dysfunction between the brain and body, as well as a decrease in normal function to any organ, tissue or cell.**

**The Chiropractic approach to optimum health is to detect, reduce (adjust) and thereby restore nerve normal tone to the body structures. The process of fixing communication blocks, called 'subluxations' of the spine is a lifetime process. The adjustment process will always be required and the need is ongoing. Your spinal care will start at a certain frequency and then taper down from acute spinal care to what is called maintenance care.**

**Today's doctor of Chiropractic is very well educated. He completes the same undergraduate study as a medical doctor. He or she is required to pass rigorous national Board Examination and then meet stringent state licensing requirements. He or she is required by state law to stay abreast with the latest research, attend seminars and read professional journals.**

**After taking a complete medical history a thorough examination will be conducted. Based on these findings, X-rays or other types of diagnostic or studies may be necessary. Your individual results define and document the history and state of your spinal health. Their results certainly guide the doctor in creating a special program based on your individual spinal healthcare needs. Dr. Robert C Slater DC is both state and federally empowered to make diagnosis and prescribe medically necessary treatment.**
